## SUMMARY

ASP.NET developer with a Bachelor's degree in Computing, building and maintaining e-commerce platforms and business web applications end to end — from MSSQL schema design to the production interface.
Experienced in taking over legacy ASP.NET and VB.NET codebases, integrating payment and third-party services, and working directly with clients to turn requirements into delivered features. Looking for a full-stack or back-end role with room to go deeper into C# and .NET.

## EXPERIENCE

### Software Developer

**AVE STUDIO** **August 2025 - Present, Siroki Brijeg, BiH**

- Developed and maintained e-commerce platforms and business web applications for agency clients, working across the full stack from database design to production interface
- Built and extended webshops with product catalogs, user accounts, shopping cart and card payment integration
- Designed and optimized MSSQL databases — schema design, stored procedures, indexing and query tuning on catalogs of several thousand products
- Delivered features end to end: responsive front-end interfaces in JavaScript and Bootstrap backed by ASP.NET business logic
- Took over and stabilized legacy ASP.NET and VB.NET systems, resolving production issues and adding functionality to codebases built by others
- Worked directly with clients to turn requirements into working solutions, including technical documentation and project estimates

### ASP.NET Developer Intern

**AVE STUDIO** **March 2025 - August 2025, Široki Brijeg, BiH**

- Contributed to the development of web applications using ASP.NET.
- Assisted in building web shops and custom business solutions.
- MSSQL databases: writing queries, designing tables, and managing data.

## PROJECT

### SnapEvent

Personal project · snapevent.net · April 2026 - October 2026

- Developed a web platform where guests scan a QR code and instantly share photos from their phones, with no app installation or registration required.
- Built with ASP.NET and SQL Server, with a lightweight vanilla JavaScript guest interface optimized for fast loading on crowded venue networks.
- Implemented client-side image processing: photos are resized and compressed in the browser before upload, with EXIF orientation correction, which greatly reduces upload time and server load.
- Designed a reliable upload pipeline with automatic retries, offline detection and a persistent queue (IndexedDB), so photos are sent automatically once the connection returns, even if the guest closes the page.
- Developed a custom CMS for couples with a photo gallery, fullscreen slideshow, live TV presentation that updates in real time during the event, bulk ZIP download, and a personalized guest page with cover photo and message.
- Built an admin panel for managing events, unique QR codes, validity periods and per-event photo limits, protected by per-IP rate limiting and secured authentication.

### TotalTrade

AVE STUDIO · total-trade.ba · December 2025 - October 2026

- Developed a responsive web shop using ASP.NET.
- Migrated a legacy PrestaShop store to a custom ASP.NET application on the same domain, mapping old URLs with 301 redirects to preserve search ranking.
- Enabled secure customer registration, login, and order placement.
- Designed and optimized MSSQL database structure for product catalog, customers, and orders.
- Integrated installment financing (Mikrofin) and card payments (Monri) into the checkout flow, including request handling and order status updates.

### CENTRAL STATION FOOD

AVE STUDIO · central-station.ba · April 2026 - May 2026

- Developed a responsive web application for online food ordering with a focus on a simple and user-friendly ordering process.
- Built with ASP.NET and SQL Server, covering the full order lifecycle — session-based cart with product add-ons, checkout, and automated email confirmations to customers and staff.

- Developed a custom CMS for managing products, multi-level categories, daily offers and media, with server-side image processing and role-based access control.
- Business rules such as opening hours, delivery availability and free-delivery thresholds are configurable without code changes, and staff can respond to orders by email or WhatsApp using templated quick replies.

## EDUCATION

### Bachelor’s Degree in Computing

Faculty of Mechanical Engineering, Computing and Electrical Engineering • Mostar, Bosnia and Herzegovina • 2025

## CERTIFICATIONS

### Foundational C# with Microsoft

Microsoft/freeCodeCamp • 2025

### ITDojo "C# & .NET" online Bootcamp

IT Dojo, United States Embassy Bosnia and Herzegovina • 2025

### globalsoft Code Camp - Basic

2024

- Earned certification in HTML, CSS, and JavaScript, showcasing a strong foundation in front-end web development.

## SKILLS

Front End: HTML, CSS, JavaScript, React

Back End: ASP.NET, C#, Visual Basic, MSSQL

Tools: Git, GitHub, Visual Studio, VS Code, SQL Server Management Studio

Soft skills: Organization, Communication, Proactive, Adaptive

Languages: Croatian(native), English, German
